

KOH//ENTRY/H47-FX823-L

We're being moved onto a new project, an extremely confidential one from the looks of it. It's no 110-Montauk, but information is being dripped to us in ridiculously small batches.

The team is composed of only a handful of people, with non-essential personnel being given amnestic treatment once their job is done. Which reminds me that I will need to oversee the treatment of an incoming delivery crew later today.

As far as I can tell, the project is overseen by the Assistant Director Elliot Goode. I have a few choice words about him. Besides that, I'm the medical supervisor for what I can only assume is the SCP we've yet been told about. There are some other researchers; Bachman, McFoy, Kesper, Howell, to name a few. Then there's Dr. Sylvia Santos de Pilar, the appointed Chief Scientist.

She's great. I can't really say much else.

Note: 0ATPX092 is the manifest ID for the delivery later.
